

# Sen-Tree™

## Revegetation

Sen-Tree browsing deterrent is an innovative product developed to protect new plants against kangaroos, wallabies, rabbit, pademelons and other browsing animals. Dual-active, three part product applied to certain seedlings to assist in the prevention/limitation of damage by animals. It is composed of a proprietary mix of Egg product, Adhesive and Grit.

Developed and trialled in Victoria and Tasmania by Agriculture Victoria for the Australian Market this product assists in the prevention / limitation of browsing on new and existing plantings. Easy to use and effective when used in relation to the Label the dual active deterrent lasts for up to 12 weeks. By this time, by learnt association, the browsing animal learns to source feed from other areas. In the event that there is some predation of the plant, the Second Active ingredient, the Grit component, makes the foliage unpalatable. Browsing behaviour is reduced when animals associate the odour with the unpalatable texture of the grit on the treated foliage.

- / Effective against wallabies, kangaroos and rabbits
- / Protects new or developed plants
- / Non toxic to browsing animals
- / Developed and trialled by Agriculture Victoria
- / Economical for large scale plantings
- / Can often be reused a number of times
- / Easy to use and effective
